[illegible]

This is a detailed architectural floor plan of a building, likely a school or institutional structure, given the presence of numerous classrooms and specialized rooms. The plan is oriented vertically. A central corridor system runs the length of the building, with various rooms branching off. The rooms include several large lecture halls or auditoriums on the left side, a series of smaller classrooms or lecture rooms in the center, and specialized rooms such as a library, computer lab, and administrative offices on the right. The plan is overlaid with a complex network of colored lines: purple lines form a primary loop around the perimeter and through the central corridor; green lines branch off from the purple lines, possibly representing a secondary system or zone; and yellow lines are concentrated in specific areas, such as the top-left and bottom-right, possibly indicating equipment rooms or storage areas. The drawing uses standard architectural conventions, including dashed lines for walls, solid lines for doors, and hatching for structural elements like stairs or walls. The overall layout is symmetrical and organized, with a clear flow of movement through the central corridor.
